# SYSTEM AND METHOD FOR PROVIDING
# WEB BROWSER TRAIL MARKERS

Michael L. Rishel

## Abstract

A system and method for providing web browser trail markers are disclosed.  The system includes a computer and a memory operable to store a single reference to a web page.  The system also includes a browser coupled to the memory and operable to execute on the computer.  The browser includes a first button and a second button, and, the browser, in response to activation of the first button, stores a reference to a currently accessed web page in the memory, and, in response to activation of the second button, accesses a web page referenced by the reference stored in the memory.  The method includes providing a memory location operable to store a reference to electronic content.  The method also includes providing a user interface that is operably coupled to the memory location.  The user interface includes a first button and a second button, and the user interface is operable to display electronic content.  The method further includes displaying a first electronic content in the user interface, wherein the first electronic content is located at a first reference, and storing the first reference in the memory location in response to activation of the first button.  The method includes displaying a second electronic content in the user interface, wherein the second electronic content is located at a second reference, and displaying the first electronic content reference by the first reference stored in the memory location in response to activation of the second button.
